	☐ Other:					

Continuation of 5. does NOT place the application in condition for allowance because: Applicant's representative r marks have been considered but are not persasive. Applicant argues "Sawai does not take a measurement before the reagent is mixed therein." In col. 9 lines 35-65, Sawai discusses measurements of basal medium of the sample being measured. This measurement takes place befor any of the reagent is added to the sample, "the measurement of lo may conveniently be performed with only the suspension contiaing the antibody or antigen sensitized insoluble carrer particles, said supension having been diluted with, for example, water to the same concentration as that in the mixture." This clearly states that a baseline is created without a sample. Applicant argues "Sawai does not recognize nor consider the potential for inherent turbidity in the solution." In col. 5, lines 21-40 Sawai disloses the problems associated with measurements takin when turbidity in a sample mixture occurs. Those problems incolve various disadvantasges such as poor precision and reproducition, since the reaction has to be carried out in a standing state with an extremely dilute latex.
